Preface

ix

1 Real Numbers

1.1. Set-Theoretic Preliminaries	1
1.2. Axioms for the Real Number System	3
1.3. Consequences of the Addition Axioms	4
1.4. Consequences of the Multiplication Axioms	5
1.5. Consequences of the Order Axioms	9
1.6. Consequences of the Least Upper Bound Axiom	12
1.7. The Principle of Archimedes and Its Consequences	16
1.8. The Principle of Nested Intervals	21
1.9. The Extended Real Number System	22
Problems	24

2 Sets

2.1. Operations on Sets	27
2.2. Equivalence of Sets	29
2.3. Countable Sets	31
2.4. Uncountable Sets	33
2.5. Mathematical Structures	35
2.6. n -Dimensional Space	39
2.7. Complex Numbers	43
2.8. Functions and Graphs	48
Problems	50

3 Metric Spaces

3.1. Definitions and Examples	53
3.2. Open Sets	61
3.3. Convergent Sequences and Homeomorphisms	63
3.4. Limit Points	73
3.5. Closed Sets	76
3.6. Dense Sets and Closures	78
3.7. Complete Metric Spaces	80
3.8. Completion of a Metric Space	87
3.9. Compactness	91
Problems	97

4 Limits

4.1. Basic Concepts	99
4.2. Some General Theorems	107
4.3. Limits of Numerical Functions	108
4.4. Upper and Lower Limits	117
4.5. Nondecreasing and Nonincreasing Functions	119
4.6. Limits of Numerical Sequences	123
4.7. Limits of Vector Functions	126
Problems	129

5 Continuous Functions

5.1. Continuous Functions on a Metric Space	132
5.2. Continuous Numerical Functions on the Real Line	139
5.3. Monotonic Functions	142
5.4. The Logarithm	145
5.5. The Exponential	149
5.6. Trigonometric Functions	157
5.7. Applications of Trigonometric Functions	165
5.8. Continuous Vector Functions of a Vector Variable	172
5.9. Sequences of Functions	179
Problems	183

6 Series

6.1. Numerical Series	186
6.2. Absolute and Conditional Convergence	194
6.3. Operations on Series	196
6.4. Series of Vectors	203
6.5. Series of Functions	211
6.6. Power Series	213
Problems	218

7 The Derivative

7.1. Definitions and Examples	223
7.2. Properties of Differentiable Functions	233

7.3. The Differential	235
7.4. Mean Value Theorems	237
7.5. Concavity and Inflection Points	240
7.6. L'Hospital's Rules	243
Problems	245

8 Higher Derivatives

8.1. Definitions and Examples	249
8.2. Taylor's Formula	251
8.3. More on Concavity and Inflection Points	255
8.4. Another Version of Taylor's Formula	257
8.5. Taylor Series	259
8.6. Complex Exponentials and Trigonometric Functions	262
8.7. Hyperbolic Functions	267
Problems	270

9 The Integral

9.1. Definitions and Basic Properties	274
9.2. Area and Arc Length	287
9.3. Antiderivatives and Indefinite Integrals	291
9.4. Technique of Indefinite Integration	296
9.5. Evaluation of Definite Integrals	308
9.6. More on Area	317
9.7. More on Arc Length	328
9.8. Area of a Surface of Revolution	335
9.9. Further Applications of Integration	342
9.10. Integration of Sequences of Functions	349
9.11. Parameter-Dependent Integrals	355
9.12. Line Integrals	361
Problems	370

10 Analytic Functions

10.1. Basic Concepts	373
10.2. Line Integrals of Complex Functions	381
10.3. Cauchy's Theorem and Its Consequences	389

10.4. Residues and Isolated Singular Points	404
10.5. Mappings and Elementary Functions	416
Problems	427

11 Improper Integrals

11.1. Improper Integrals of the First Kind	431
11.2. Convergence of Improper Integrals	438
11.3. Improper Integrals of the Second and Third Kinds	443
11.4. Evaluation of Improper Integrals by Residues	447
11.5. Parameter-Dependent Improper Integrals	457
11.6. The Gamma and Beta Functions	467
Problems	479

Appendix A Elementary Symbolic Logic	482
---	-----

Appendix B Measure and Integration on a Compact Metric Space	484
---	-----

Selected Hints and Answers	489
-----------------------------------	-----

Index	505
